क्षितिज- NEP-2020 readiness Index creation

Execution Framework – internal to myelin

1. Purpose of project Kshitij

Project Kshitij is designed to surface **NEP-2020 readiness as a layered, evolving reality**, not as a single score.

Readiness is understood through:

- orientation,
- classroom practice,
- teacher cognitive capacity,
- school enablement and systems,
- collaboration with parents,
- and early student learning signals.

These layers are progressively converted into:

- targeted micro-interventions, and
- a contextual, execution-tested **NEP-2020 Playbook**.

2. Overall Execution Architecture

i. Leadership & Teacher Orientation
ii. Classroom Practice Depth
iii. Teacher Cognitive Capacity (Baseline – All Teachers)
iv. School Enablement & Systems
v. Micro-Intervention 1 (FP-Focused)
vi. Practice Logging & Reflection (3 Weeks)
vii. Teacher Cognitive Capacity (Post / Deep Diagnostic)
viii. Selection of High-Cognition Teachers

ix. Student Cognitive & Competency Signals (Sample)
x. Teacher–Parent Collaboration
xi. Teacher Self-Observed Mid-Line Assessment
xii. Selection of Champion Teachers
xiii. Micro-Intervention 2 (Teachers Only)
xiv. Composite Readiness Index
xv. NEP-2020 Playbook (Actionable, Co-Created)

Design principles

- No single tool gives readiness
- Readiness emerges from **intersections, sequences, and trajectories**
- Trust-based reflection is preferred over surveillance

3. Task groups and their role in the readiness Index

Task Group A — Orientation Baselines

Who

- School Leaders
- All Teachers

What it captures

- Natural attention and belief orientation across the 5 NEP Foundational Principles (FP1–FP5)

Why it matters

- Orientation reflects *intent and priority*, not behaviour
- Leadership and teacher intent shapes culture, focus, and decision-making

Insight added to Index

- Leadership–Teacher alignment / misalignment
- Early signals of intent–practice gaps

Task Group B — Classroom Practice Orientation & Depth

Who

- Teachers

What it captures

- How NEP values are enacted in daily classroom practice
- Practice depth bands:
  - D1 Procedural
  - D2 Responsive
  - D3 Diagnostic
  - D4 Adaptive

Why it matters

- NEP success depends on depth, not adoption
- Reveals how beliefs translate into action

Insight added to Index

- FP-wise depth heatmaps
- Procedural vs diagnostic vs adaptive patterns
- Clear targets for micro-interventions

Task Group C — Teacher Cognitive & Computational Thinking

Who

- All Teachers

What it captures

- How teachers reason, diagnose, design, and decide
- Cognitive readiness for adaptive teaching

Why it matters

- Higher practice depth requires higher cognitive capacity
- Identifies teachers who can lead change, not just receive training

Insight added to Index

- Identification of high-leverage teachers
- Cognitive diversity across schools and clusters

Task Group D — School Enablement & System Readiness

Who

- Teachers (experience lens)
- Leaders (structure lens)

Domains covered

- Learning diagnostics
- Teacher development culture
- Holistic Progress Card (HPC) enablement
- Leadership routines
- Parent & community systems

Why it matters

- Teacher effort fails without system support
- Distinguishes individual capability from institutional readiness

Insight added to Index

- Assessment-as-ritual vs assessment-as-learning

- Culture readiness for sustained change
- System constraints on practice depth

4. Micro-Intervention 1 (FP-Focused)

Rationale

- Teachers can meaningfully shift only **1–2 Foundational Principles at a time**
- Parallel FP work allows wider coverage and faster learning
- Depth is prioritised over breadth

Structure (Proposed)

Workshop	FP Focus	Participants	Core Focus
A	FP-1 (Every Child is Unique)	Teachers + Leaders	Seeing learner diversity diagnostically
B	FP-2 (Holistic & Experiential Learning)	Teachers	Redesigning learning tasks
C	FP-3 (Reflective Practitioner)	Teachers + Academic Leaders	Reflection, safety, adaptivity
D	FP-4 or FP-5	Leaders + Select Teachers	Systems, assessment, collaboration

Note
FP-5 (Collaboration) is reinforced primarily through parent engagement, not workshops alone.

Value added to Index

- FP-specific response capacity
- Pre-intervention vs post-practice signals
- Cross-cohort FP comparison

5. Practice logging & reflection cycle (3 Weeks)

Who

- Teachers participating in Micro-Intervention 1

How

- Trust-based commitment logged on the myelin portal
- ~10 minutes per day (or near-daily)

What is logged

- Practice attempted
- What worked / didn't work
- Challenges faced
- Early student or self-observed shifts

Why it matters

- Converts workshop learning into lived practice
- Generates longitudinal evidence, not snapshots

Insight added to Index

- Practice consistency vs drop-off
- FP-specific friction points
- Early indicators of sustainable change

6. Teacher cognitive capacity (Deep Diagnostic)

Who

- All Teachers

What it captures

- Cognitive processing after practice and reflection
- Diagnostic and adaptive thinking in context

Why it matters

- Measures cognition shaped by real classroom experience
- More meaningful than abstract baseline cognition

Insight added to Index

- Evidence-based identification of high-cognition teachers

7. Selection of high-cognition teachers & student diagnostics

Student Cognitive & Competency Signals (Sample-Based)

Who

- Sample students taught by selected high-cognition teachers
- One standard one class maximum per teacher

What is assessed

- Competency-based understanding
- Cognitive demand
- Computational thinking indicators (where applicable)

Why it matters

- Tests the teacher cognition → student learning relationship
- Avoids large-scale student testing

Insight added to Index

- Early learning impact signals
- High-leverage teaching patterns for the playbook

8. Teacher–Parent Collaboration Baseline

Design Intent

Teacher–parent collaboration is explicit in NEP-2020 and cannot remain self-reported by schools alone.

Who answers

- Parents

How

- Survey shared by teachers during/after the reflection cycle
- Framed as learning improvement, not evaluation

What it captures

- Clarity of learning communication (beyond marks)
- Home-learning guidance
- Trust and partnership
- Understanding of progress and expectations

Insight added to Index

- Claimed vs experienced collaboration
- System-enabled vs teacher-dependent engagement

9. Teacher self-observed mid-line assessment

Who

- Teachers who completed:
    - reflection logs,
    - parent collaboration,
    - (where applicable) student diagnostics

What it captures

- Teacher's own assessment of:
  - readiness to deepen practice,
  - confidence,
  - constraints,
  - priorities for support

Why it matters

- Introduces teacher self-authored readiness
- Prevents external-only interpretation

Insight added to Index

- Ownership and prioritisation signals

10. Selection of champion teachers & micro-intervention 2

Champion Teacher Selection Criteria

- Post-reflection cognitive capacity
- Practice consistency
- Parent collaboration maturity
- Self-observed readiness and articulation

Micro-Intervention 2 (Teachers Only)

Purpose

- Not a training intervention
- A sense-making and prioritisation intervention

Focus

- Value vs effort mapping of NEP practices

- Identifying high-leverage interventions
- Articulating real constraints and enablers
- Co-creating inputs for the NEP-2020 Playbook

Value added

- Teacher-defined priorities
- Grounded sequencing of interventions
- Sustainable, adoption-ready recommendations

11. Composite Readiness Index

The index integrates:

- intent,
- practice,
- cognition (before & after),
- systems,
- reflection trajectories,
- parent validation,
- early student impact,
- and teacher self-assessment.

It represents **readiness in motion**, not a static score.

12. Impact on NEP-2020 Playbook Creation

The playbook is **derived**, not pre-designed.

It becomes:

- FP-specific
- Role-specific
- Context-sensitive
- Teacher-co-created

- Execution-tested

13. Week-by-Week Execution Plan

Project Kick-off Date: 19 January
Current Status: Orientation phase for leaders and teachers in progress

Week 1 | 19–25 January

Phase: Orientation & Baseline Alignment

Key Activities

- Project kick-off with school leadership and coordinators
- NEP-2020 orientation sessions for:
  - School leaders
  - All teachers
- Completion of:
  - Leadership Orientation Baseline (FP1–FP5)
  - Teacher Orientation Baseline (FP1–FP5)

Purpose

- Build a shared NEP language
- Surface belief and attention orientation (not evaluation)
- Establish leadership–teacher intent alignment

Primary Outputs

- Leadership orientation maps
- Teacher orientation maps
- Early signals of intent–practice gaps

Week 2 | 26 January – 1 February

Phase: Classroom Practice & Cognitive Baselines

Key Activities

- Teachers complete:
  - Classroom Practice Orientation & Depth baseline (D1–D4)
  - Teacher Cognitive & Computational Thinking baseline
- School Enablement & Systems surveys administered:
  - Teacher lens (experience)
  - Leader lens (structure)

Purpose

- Understand how NEP intent translates into classroom practice
- Establish baseline teacher cognitive capacity
- Identify system enablers and constraints before intervention

Primary Outputs

- FP-wise practice depth heatmaps
- Cognitive diversity profiles
- System readiness signals

Week 3 | 2–8 February

Phase: Micro-Intervention 1 (FP-Focused)

Key Activities

- Conduct Micro-Intervention 1 workshops:
  - 4 cluster level workshops covering 1–2 Foundational Principles each
- Participants include:
  - Teachers
  - Academic leaders (as relevant)

Purpose

- Initiate focused, depth-oriented shifts

- Avoid cognitive overload
- Prepare teachers for practice experimentation

Primary Outputs

- FP-specific intervention cohorts
- Clear practice focus for each participating teacher

Weeks 4–6 | 9–29 February

Phase: Practice Logging, Reflection & Parent Collaboration

Key Activities

- Teachers begin 3-week trust-based practice logging on portal
  - ~10 minutes per day / near-daily
- Reflection focuses on:
  - practice attempted
  - what worked / didn't
  - challenges
  - early student signals
- Teacher–Parent Collaboration questionnaire introduced:
  - Shared by teachers
  - Parent responses collected during this window

Purpose

- Convert workshop learning into lived classroom practice
- Observe practice trajectories, not one-time change
- Validate collaboration through parent voice

Primary Outputs

- Longitudinal reflection logs
- FP-specific friction and momentum signals
- Parent-validated collaboration insights

Week 7 | 1–7 March

Phase: Post-Practice Cognitive Diagnostic & Selection

Key Activities

- Teachers complete post /deep cognitive diagnostic
- Analysis of:
    - cognitive shifts after practice
    - reflection quality and consistency
- Selection of high-cognition teachers

Purpose

- Measure cognition shaped by real classroom experience
- Identify teachers with high leverage potential

Primary Outputs

- Evidence-based list of high-cognition teachers
- Cognitive shift indicators

Week 8 | 8–14 March

Phase: Student Cognitive & Competency Signals (Sample-Based)

Key Activities

- Conduct student diagnostics for:
    - selected high-cognition teachers
    - one class / one standard per teacher
- Focus on:
    - competency understanding
    - cognitive demand
    - computational thinking (where applicable)

Purpose

- Validate teacher cognition → student learning relationship
- Generate early impact evidence without system-wide testing

Primary Outputs

- Student cognitive and competency signals
- High-impact teaching pattern insights

Week 9 | 15–21 March

Phase: Teacher Self-Observed Mid-Line Assessment

Key Activities

- Teachers complete self-observed mid-line assessment
- Reflection includes:
    - confidence
    - constraints
    - readiness to deepen practice
    - priorities for next support

Purpose

- Capture teacher-owned readiness after evidence
- Prevent external-only interpretation of readiness

Primary Outputs

- Self-authored readiness signals
- Teacher-defined priorities

Week 10 | 22–28 March

Phase: Champion Teacher Selection & Micro-Intervention 2

Key Activities

- Selection of champion teachers based on:
  - post-practice cognition
  - reflection consistency
  - parent collaboration maturity
  - self-observed readiness
- Conduct Micro-Intervention 2 (Teachers Only)

Focus of Intervention 2

- Value vs effort prioritisation of NEP practices
- Identification of high-leverage interventions
- Articulation of real classroom and system constraints
- Inputs for NEP-2020 Playbook creation

Primary Outputs

- Teacher-prioritised intervention set
- Value–effort maps
- Co-created playbook inputs

Weeks 11–12 | 29 March – 11 April

Phase: Readiness Index Synthesis & Playbook Drafting

Key Activities

- Integrate signals across all layers:
  - orientation
  - practice
  - cognition (pre & post)
  - systems
  - reflection
  - parent voice

- student signals
- teacher self-assessment
- Construct Composite Readiness Index
- Draft NEP-2020 Playbook (Version 1)

Purpose

- Convert evidence into structured insight
- Produce an execution-tested, teacher-informed playbook

Primary Outputs

- Composite NEP-2020 Readiness Index
- NEP-2020 Playbook (co-created, actionable)

Dates may shift marginally based on school calendars; sequencing must remain unchanged.

13A. Timelines

Earlier Timeline Item	Fixed Dates
Project Kick-off	19 Jan
Leader Orientation Diagnostics	19–21 Jan
Teacher Orientation Diagnostics	22 Jan
Teacher Practice Diagnostics	27–28 Jan
Micro-Intervention 1 (Offline)	2–6 Feb
Cognitive Diagnostics (All Teachers)	7–8 Feb
Student Diagnostics (Sample)	9–14 Feb
Mid-line Reflection	~20 Feb
Selection for Micro-Intervention 2	18–19 Feb

14. Summary (Internal)

Project Kshitij moves from measuring NEP readiness to understanding how NEP readiness is built-by observing intent, capacity, context, action, validation, and early impact-and converts that understanding into a living NEP-2020 playbook.

Part2: Index designing (Self note-work to be completed by Manoj, Swati, Neha, Sonal).

Reframe the Index

Think of the NEP-2020 Readiness Index as:

A structured synthesis of signals, not a test score.

That means:

- No single instrument dominates (*Every questionnaire is instrument here*)
- No early signal is over-weighted
- Trajectory matters more than absolute values
- Contradictions are informative, not errors

This will protects us from:

- false precision
- ranking temptation
- premature policy conclusions

2. We now *have* Index-ready signals

You've already designed seven distinct signal types:

1. Orientation signals ------ Already done (Leader & Teacher FP attention)
2. Practice depth signals ----- Already done (D1–D4 across FPs)
3. Teacher cognitive capacity----Already done (Baseline + Post)
4. System enablement signals --- Already done (Teacher + Leader lenses)

5. Practice trajectory signals ---- yet to design (instrument and UX engineering pending)
   (Reflection consistency & content)
6. Validation signals ---- yet to design (instrument and engineering integration of HPC API pending)
   (Parent collaboration)
7. Early impact signals ----- already in done (regular diagnostic test, but will have to work on UX engineering, discussed with Harshad, Chetan already)
   (Student cognitive & competency sample)

   Teacher self-observed readiness **(meta-signal)** – Yet to design This will be *rarely achieved* richness.

3. Scoring: Two-layer Index

Layer 1: Signal Normalisation (No judgement yet)

Each signal should first be converted into:

- a **directional indicator**
- not a performance score

Examples:

- Orientation → *Attention density*
- Practice → *Depth distribution*
- Cognition → *Capacity band*
- Reflection → *Consistency index*
- Parent → *Experience alignment*
- Student → *Cognitive demand exposure*

Ideally we should:

- Avoid aggregation
- Avoid weighting
- Preserve variance

Layer 2: Readiness constructs

Only after normalisation, group signals into **5 readiness constructs**:

Construct	Signals contributing
Intent Readiness	Leader + Teacher orientation
Practice Readiness	Practice depth + reflection
Capacity Readiness	Teacher cognition (pre/post)
System Readiness	Enablement & leadership routines
Ecosystem Readiness	Parent + student signals

This will help keeping NEP philosophy intact.

4. Scoring without betraying the philosophy

When you *do* score:

- Use **bands**, not points
  (e.g., Emerging / Developing / Anchoring / Transforming)
- Score **within constructs**, not across schools initially
- Allow:
  - high intent + low practice
  - high practice + low system
  - high cognition + low confidence

These mismatches will be the **real insight**.

5. One guardrail (please don't skip this Manoj)

Before finalising any composite score, ask:

"If this number goes up by 10%, what *real change* does it represent in classrooms?"

If the answer isn't obvious → the scoring is wrong.
